Attribut:Schema definition

„Schemadefinition (Schema definition)“ ist ein softwareseitig fest definiertes Attribut, das die Definition des Schemas speichert. Es wird von [Semantic MediaWiki](#) zur Verfügung gestellt. Dieses Attribut ist softwareseitig fest definiert und auch bekannt als [Spezialattribut](#). Es erfüllt eine besondere Funktion, kann aber wie jedes andere [benutzerdefinierte Attribut](#) verwendet werden.

Annotationen4
[vorherige 5002050100250500](#)[nächste 500](#)

Filter<p>Der Filter für die Suche nach Datenwerten zu Attributen unterstützt die Nutzung von Abfrageausdrücken wie bspw. <code>~</code> oder <code>!</code>. Je nach genutzter Abfragedatenbank werden auch die groß- und kleinschreibungsunabhängige Suche oder auch folgende weitere Abfrageausdrücke unterstützt:</p><code>in:</code>: Das Ergebnis soll den angegebenen Begriff enthalten, wie bspw. <code>in:Foo</code><code>not:</code>: Das Ergebnis soll den angegebenen Begriff nicht enthalten, wie bspw. <code>not:Bar</code>

Unterhalb werden 4 Seiten angezeigt, auf denen für dieses Attribut ein Datenwert gespeichert wurde.
