WINMOR Protocol Specification (Preliminary)

Version: 1.0.0 Oct. 13, 2009

Author: Rick Muething, KN6KB

This document is a preliminary specification of the WINMOR protocol. It is intended to provide a general overview of the protocol and its operation. It is not intended to be a final specification and is subject to change without notice.

The WINMOR protocol is a simple, text-based protocol for transmitting Morse code over a radio channel. It is designed to be easy to use and to be compatible with existing WINMOR equipment.

The WINMOR protocol consists of a set of commands and responses that are used to control the transmission of Morse code. The commands are sent from the transmitting station to the receiving station, and the responses are sent from the receiving station to the transmitting station.

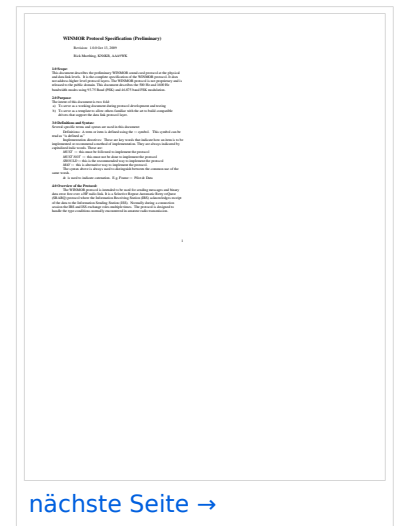

The WINMOR protocol is designed to be used in a variety of environments, including both indoor and outdoor settings. It is also designed to be compatible with a wide range of equipment, including both commercial and amateur radio equipment.

The WINMOR protocol is a simple and effective way to transmit Morse code over a radio channel. It is easy to use and is compatible with existing WINMOR equipment. It is also designed to be compatible with a wide range of equipment, including both commercial and amateur radio equipment.
