EMV (Elektromagnetische Verträglichkeit)

Grundsatzbetrachtungen

In dieser Kategorie sind Informationen zu Elektromagnetische Verträglichkeit (EMV) zu finden. Darunter versteht man die Fähigkeit eines technischen Gerätes, andere Geräte nicht durch (ungewollte) elektrische oder elektromagnetische Effekte zu beeinflussen. Oder auch selbst durch andere Geräte gestört zu werden. Grundlegend für die Verträglichkeit ist dabei die Elektromagnetische Interferenz (EMI).

Dabei sollte eben die EMI dank EMV keine Störeffekte hervorrufen.

Wir sehen die prinzipiellen Wirkungswege, hier am Beispiel von Störstrahlung (Handy) und leitungsgeführte Störungen über das Netzkabel. In der Abbildung ebenfalls angeführt ist die Möglichkeit der elektrostatischen Entladung (Electrostatic Discharge, ESD). In unserem Kontext jedoch von geringerer Bedeutung.

Generell kann von einem Weg von einer Quelle über einen Kopplungsmechanismus zum Empfänger gesprochen werden.

Übersicht der Störungskategorien

Wie die untenstehende Infografik zeigt, kann ein Produkt (in diesem Zusammenhang eine Testobjekt, Equipment Under Test, EUT) (hauptsächlich) durch

- Leitungsgeführte Störungen (**Conducted Emissions**) oder durch
- Störstrahlungen (**Radiated Emissions**)

beeinträchtigt werden.

In der Infografik werden dabei auch die relevanten Normen aufgeführt. Siehe auch [CISPR Guide 2019](#).

EMV-Normen

Bedingt durch die hochkomplexe Sachlage (es existiert eine grosse Anzahl komplexer Geräte, die zum Teil in kleiner Entfernung von einander betrieben werden) gibt es eine Reihe von internationalen Normen, die sich jedoch je nach Weltregion (EU; USA; Asien,...) weiter unterscheiden.

Einteilung der EMV Normen

Basisnormen

Diese Gruppe ist ihrerseits unterteilt

- Generelle Standards
- Umwelt
- Emission
- Immunität
- Installation/Abhilfemassnahmen
