WINMOR

- Ein neues Soundkarten TNC im Betatest

The screenshot shows the 'WINMOR Sound Card TNC' application window. It features a blue title bar and a light gray main area. On the left, there are two panels: 'Connection State' with a green bar labeled 'IRS' and 'Connected to: OE3ZK-3 @ 500 Hz', and 'Transmit' with 'Xmt Frame: ACK: 01C0', 'Outbound bytes queued: 0', and 'Sent bytes confirmed: 61'. The right side contains 'Receive' controls including a 'Rcv Level' slider, a 'Busy Detector' checkbox, and a 'Remote Station Offset' of 1,2 Hz. Below these are 'Queued: 0' and 'Sequenced: 4796' fields, and an empty 'Rcv Frame' field. At the bottom right of the main area are 'HELP' and 'Hide' buttons. The interface also displays a 'Waterfall 2 KHz' spectrum plot and a '16PSK Score: 71' indicator.
